The F5 and Dell Technology Partnership

Key benefits

· Faster deployments
· Dynamic data management
· Secure and scalable virtualization
· Improved performance and
  availability

As a Dell Global Preferred Partner, F5 technologies are integrated into key Dell enterprise solutions. Both F5 and Dell have strong partnerships with Microsoft, Oracle, and VMware, and continue to invest in joint development of total enterprise application solutions.

Simplified Data Management, Improved Availability

F5 and Dell keep your data center productive and flexible enough to support virtualization on your existing IT infrastructure, without added complexity. F5 technologies are a critical component of the Dell Enterprise solution portfolio, and optimize network, server, and storage environments to ensure the highest performance, security, and availability at the lowest possible cost. For example, F5® BIG-IP® Application Delivery Networking systems and F5 ARX® Series intelligent file virtualization devices work with Dell server and storage platforms. Together, these technologies help organizations securely and cost-effectively provide the file virtualization that supports flexible data mobility—and the necessary business continuity for high enterprise-application availability. Automated and intelligent management policies support simplified data management.

· Implementing Oracle Grid at SUNY

Business Solutions

· Accelerating Application Delivery With Nimble Networking Platforms
· Simplifying Data Management and Mobility

F5 and Dell data center solutions.

Faster deployment with validated joint solutions

Streamline solution deployments with strong interoperability thanks to F5 and Dell partnerships with Microsoft, Oracle, and VMware.

Dynamic data management

Simplify data management and boost availability with intelligent file virtualization and storage.

Secure and scalable virtualization

Meet TCO and ROI goals with flexible, secure storage that grows with your organization through intelligent file virtualization.

Improved performance and availability

F5 BIG-IP Application Delivery Controllers support better performance, for higher availability and an improved end-user experience.
